

System Architecture

How the agent works — and how to build your own.

LEGEND — WHAT EACH PART DOES

Slack App

The bot interface where you type commands and receive responses. Everything you see happens here — in any channel or DM.

Heroku

The 24/7 cloud server where the bot lives and runs. Without it, the bot is just code sitting in a folder — nothing responds.

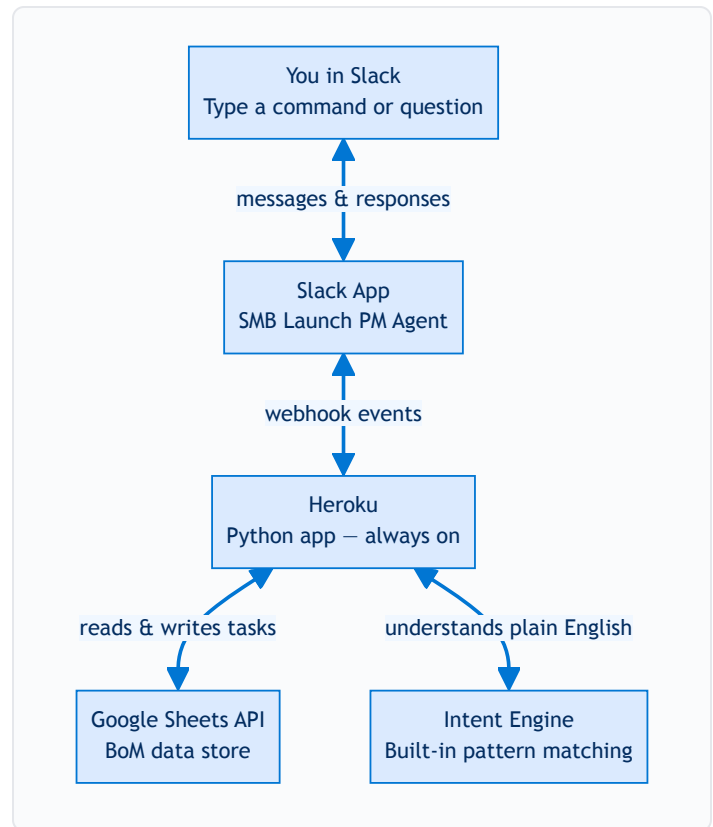

Google Sheets API

The live connection to the BoM. The bot reads your tasks from here and writes updates back the moment you tap an action button in Slack.

Intent Engine (built-in)

Custom keyword and pattern matching baked into the bot. Lets you ask questions in plain English — no external AI service needed.

HOW IT WORKS

HOW TO BUILD YOUR OWN — APPROVAL PATH
