

Commands Reference

All commands are sent to `@SMB Launch PM Agent` in Slack — in any channel or via DM.

1 Your Personal Task Summary

DM the bot to see your own open tasks, blocked items, and upcoming deadlines — personalized to you. Each task card includes action buttons to update the Google Sheet directly from Slack.

`what's on my plate?` Your open tasks with status and due dates

`my blocked items` Only your blocked or at-risk tasks

`what do I own?` Full list of everything assigned to you

↑ Update Google Sheet — Without Leaving Slack

Every task card returned by the agent includes action buttons. Tap one and the Google Sheet updates instantly — no need to open a browser or find the row yourself.

`✓ Done` Marks the task complete in the BoM

`● In Progress` Sets status to In Progress

`● Blocked` Flags the task as blocked

`📅 Date` `▶ Next Step` `📝 Note` Update due date, next step, or add a note — all from Slack

2 Ask Anything in Plain English

No commands to memorize. Ask in natural language and the agent understands intent — by person, status, priority, or deadline.

`what's blocked?` All blocked items with owners

`what does @Caylin own?` Tasks filtered by any team member

`what's due this week?` Upcoming deadlines across the full team

`what's overdue?` Past-due items with owners flagged

3 Launch Snapshot — Full Team Health View

An on-demand view of the entire launch: status breakdown, blockers, overdue items, and what's up next. The same report that auto-posts every Friday.

`launch snapshot` Full team health view, right here in Slack

4 Bill of Materials — Every Task, Every Owner

Pull the full BoM grouped by section, grouped by owner, or as a detailed weekly status — all live from the Google Sheet.

`launch bom` Full board of materials by section

`launch owners` Every task grouped by owner

`launch status` Detailed weekly status with overdue + blockers called out

5 Multi-Launch — Switch and Register Launches

The agent isn't locked to one launch. Register a new launch with its Google Sheet and switch to it in plain language — no code changes, no IT ticket.

`list launches` All registered launches with active marker

`let's work on 264` Switches the active launch by name

`active launch` Confirms which launch is currently active

`register launch [name] [sheet-id] [tab] [#channel]` Adds a new launch to the registry
